

## HB 1375 -- WATER QUALITY STANDARD MODIFICATIONS

SPONSOR: Miller

Currently, as part of the implementation of any revised water quality standards modifications of 25% or more, the Department of Natural Resources must conduct an evaluation of the environmental and economic impacts of the modification on a subbasin basis. This bill requires the department to conduct the evaluation on a subwatershed basis for all changes in water quality standards. The evaluations must be conducted at the 12-digit hydrologic unit code level.
